

LAB EXERCISE: POINTER AND FUNCTION

Write a program that will calculate employee's new salary, based on their position and years of working. Create a function(s) to calculate the bonus that will be obtained by the employee. Figure 1 shows the example of program execution.

** Use pointer and function*

Position	Years of Working	Salary (RM)	Bonus (RM)
Junior	1-5	2600	300
	More than 5 years	3600	
Senior	1-5	4600	500
	More than 5 years	5600	

```
Enter staff ID           : EE1234
Enter years of working   : 3
Enter your position [1: Junior, 2: Senior] : 1

Position      : Junior
Years of working : 3
New Salary    : 2900

Process returned 0 (0x0)   execution time : 10.728 s
Press any key to continue.
